

# INFORMATION CONCERNING THE INSTALLATION PROCEDURE

---

Installing ADVISOR (version 2004 and version 2004 SP1) under MATLAB 6.5 (R13) requires a download from The MathWorks homepage.

If this download has not been installed yet, the ADVISOR installation procedure connects to The MathWorks where the self-extracting executable 'GenericDll\_1p1.exe' should be downloaded and extracted into the MATLAB directory.

In order for MATLAB to recognize the newly installed files, the Toolbox Cache has to be refreshed with the command '**rehash toolboxcache**'.

Afterwards, the ADVISOR installation procedure has to be started again.

For further informations about the download see also
