AVL Training

TRAINING COURSES FOR AVL INSTRUMENTATION & TEST SYSTEMS

What is AVL Training?

AVL Training is AVL's comprehensive range of training courses to ensure your staff can safely and effectively operate AVL equipment and competently perform a wide range of testing tasks. An investment in training is an investment in employee motivation and skills that in turn will have a positive effect on competitiveness. Correctly trained system operation can also extend the lifetime of your equipment.

What types of training courses and services are included?

AVL offers the following types of training courses:

Product Training: AVL's Product Training courses teach the functionality, operation, parameterization and maintenance of AVL test systems and instruments.

Technology Seminars: In AVL's Technology Seminars, participants learn about existing and new technologies, testing topics as well as legislative demands for engine and powertrain testing.

Education Plans: AVL offers additional support by developing tailored education plans, in which the training courses are focused on tackling your specific tasks, within your requirements and processes.

Where do the training courses take place?

AVL Training is provided both on-site or at any of the AVL Training Centers. The courses are carried out by our specially qualified, professional trainers.

AVL operates a global network of Training facilities to provide a fast track to comprehensive skills both for AVL test equipment, as well as for new technologies and testing methods for engines and powertrains. Our Training Centers are well equipped, with simulators for practical exercises as well as real test equipment.

When do I / my employees need training?

Training is always recommended for motivating and developing your team. There are also times when it is particularly advisable:

- If you have a complex test facility, your staff must be able to handle the test equipment competently and safely.
- If you have to fulfill new testing tasks, your staff need to be able to set up new test procedures on the testbed.
- If new legislation is introduced you and your staff will have to get familiar with new test equipment and to adapt your test procedures.
- If you want to minimize stoppages due to system faults, your team – or your maintenance department – need to be able to recognize and repair the fault.

What do training courses cost?

The training courses are charged per course. An average course lasts approximately 4 days and is limited to 6 participants. Please contact your local AVL Affiliate for pricing details and cancellation fees.

How can I get on a course?

You can find a comprehensive catalog of AVL training courses on the AVL website, Testing Solutions - https://www.avl.com/training. If you would like to purchase a training course, please contact your local AVL Sales or Service representative.
