PROGRAM PREVIEW

The 9th AVL Large Engine TechDays will focus on decarbonization and its impact on the future of all large engine applications and their power systems. The topics will cover pathways for sustainable CO₂ reduction by means of technologies with highest system efficiency, alternative fuels towards hydrogen-based energy carriers as well as alternative prime movers such as fuel cells.

The AVL Large Engine TechDays are a well-established forum, where the worldwide industry experts from large engine developers, OEMs, suppliers and user groups such as shipowners and locomotive operators meet and discuss their plans for the decarbonization strategy and the success of their high power application.

The 2020 conference will be opened by renowned keynote speakers from Rolls-Royce, MAN and WinGD, who will share

their views and opinions on the overall conference theme.

A new session for the 9th AVL Large Engine TechDays will include a lively debate on decarbonization of future propulsion system technology and system architecture as well as fuels for 2050.

A panel discussion will host R&D leaders from the industry of designers, builders and users. The 2020 event also invites the prominent manufacturing groups from China, Japan and Korea.

Our upcoming conference will focus on high-level expert talks and networking possibilities throughout the entire event.

Excellent networking possibilities will be encouraged by a cocktail reception prior to the conference and a social evening on Tuesday, April 28th 2020.

CONFERENCE DETAILS

Conference Office: AVL List GmbH, Hans-List-Platz 1, 8020 Graz, Tel.: +43 (316) 787-927, event@avl.com

Conference Venue: Helmut-List-Halle, Waagner-Biro-Straße 98a, 8020 Graz. Shuttle bus service to conference hotels.

Date: Tuesday, April 28th and Wednesday, April 29th 2020

Conference Fee: Early Booking Fee: € 1,160.- (plus 20% VAT) for registrations until January 6th, 2020
General admission: € 1,290.- (plus 20% VAT)
